President's Message

Our search for a new General Meeting venue is still on-going. We are considering a room at the White Plains Library (not the main auditorium). Bob Marich has seen it and took a few pictures. I need to see it too but have not had a chance yet. If you have any other suggestions for a location, please get in touch with me.

With the ink on the AT&T breach not even dry yet, we are now faced with one at Ticketmaster, supposedly involving 560 millions customers. That is more than the US population alone. Experts are still debating the veracity of the data. Regardless, it is a stark reminder that we need to be constantly vigilant for suspicious activity on our accounts, emails, texts, ... Do not forget that you can check if your email address has been exposed by checking your digital footprint at <https://www.malwarebytes.com/digital-footprint>.

The club has entered the 21st century of the financial word. We now have a business credit card so we can pay for a variety of our expenses AND get 1.5% cash back. The card has no annual membership fee.

Thanks.

Must-use Windows software: 17 PC apps you need to try in 2024

Last year was dominated by artificial intelligence. The release of ChatGPT in autumn 2022 triggered such huge hype that every software manufacturer rushed to integrate real or supposed AI functions into their products and advertise them heavily.

Cold, dry snaps accompanied three plagues that struck the Roman Empire

For those who enjoy pondering the Roman Empire's rise and fall — you know who you are —

consider the close link between ancient climate change and infectious disease outbreaks.

Periods of increasingly cooler temperatures and rainfall declines coincided with three pandemics that struck the Roman Empire, historian Kyle Harper and colleagues report January 26 in Science Advances.

When Online Content Disappears: 38% of webpages that existed in 2013 are no longer accessible a decade later

The internet is an unimaginably vast repository of modern life, with hundreds of billions of indexed webpages. But even as users across the world rely on the web to access books, images, news articles and other resources, this content sometimes disappears from view.

A new Pew Research Center analysis shows just how fleeting online content actually is:

38% of webpages from 2013 are no longer accessible

% of links from each year that are no longer accessible as of October 2023

Source: Pew Research Center analysis of a random selection of URLs collected by the Common Crawl web repository (n=999,989) and checked using page and DNS response codes. Web pages defined as inaccessible if they returned a status code of 204, 400, 404, 410, 500, 501, 502, 503, 523 or did not return a valid status code.

A mass parachute jump over Normandy kicks off commemorations for the 80th anniversary of D-Day

Parachutists jumped from World War II-era planes into now peaceful Normandy to kick off a week of ceremonies marking the 80th anniversary of D-Day. Soldiers from across the United States, Britain, Canada and other Allied nations waded ashore through hails of fire on five beaches on June 6, 1944. French officials, grateful Normandy survivors and other admirers are saying “merci” but also goodbye to the fast-dwindling number of D-Day veterans still alive.

**The bad news
about smoking,
and the good
news: 8 million
die from tobacco
use yearly;
quitting brings
lasting benefits**

According to the World Health Organization (WHO), tobacco kills up to half of smokers.

Each year, smoking also kills 1.3 million non-smokers who are exposed to the second-hand smoke of the smokers they live with.

Inside the messy ethics of making war with machines

In May, after close to a decade of discussions, parties to the UN's Convention on Certain Conventional Weapons agreed, among other recommendations, that militaries using them probably need to "limit the duration, geographical scope, and scale of the operation" to comply with the laws of war.

Stephen Hawking warns artificial intelligence could end mankind

He told the BBC: "The development of full artificial intelligence could spell the end of the human race." His warning came in response to a question about a revamp of the technology he uses to communicate, which involves a basic form of AI.

But others are less gloomy about AI's prospects. The theoretical physicist, who has the motor neurone disease amyotrophic lateral sclerosis (ALS), is using a new system developed by Intel to speak.

Laser printing

Laser printing is an electrostatic digital printing process. It produces high-quality text and graphics (and moderate-quality photographs) by repeatedly passing a laser beam back and forth over a negatively charged cylinder called a "drum" to define a differentially charged image.[1] The drum then selectively collects electrically charged powdered ink (toner), and transfers the image to paper, which is then heated to permanently fuse the text, imagery, or both, to the paper. As with digital photocopiers, laser printers employ a xerographic printing process. Laser printing differs from traditional xerography as implemented in analog photocopiers in that in the latter, the image is formed by reflecting light off an existing document onto the exposed drum.

The laser printer was invented at Xerox PARC in the 1970s. Laser printers were introduced for the office and then home markets in subsequent years by IBM, Canon, Xerox, Apple, Hewlett-Packard and many others. Over the decades, quality and speed have increased as prices have decreased, and the once cutting-edge printing devices are now ubiquitous.

In the 1960s, the Xerox Corporation held a dominant position in the photocopier market.[2] In 1969, Gary Starkweather, who worked in Xerox's product development department, had the idea of using a laser beam to "draw" an image of what was to be copied directly onto the copier drum. After transferring to the recently formed Palo Alto Research Center (Xerox PARC) in 1971, Starkweather adapted a Xerox 7000 copier to make SLOT (Scanned Laser Output Terminal). In 1972, Starkweather worked with Butler Lampson and Ronald Rider to add a control system and character generator, resulting in a printer called EARS (Ethernet, Alto Research character generator, Scanned laser output terminal)—which later became the Xerox 9700 laser printer.[3][4][5]

Zombie 2nd mortgages are coming to life, threatening thousands of Americans' homes

But back after the housing crash in 2008, like millions of other Americans, McDonough had asked for a modification of the mortgage. Back then, she says, her mortgage company told her a second mortgage she had on the house was forgiven as part of the modification. And she said that seemed to be true — she stopped getting any statements for more than 10 years.

Minnesota AG Sues Contract-for-Deed Seller Who Allegedly Targeted Muslim

Update, May 20, 2024: On Sunday, the Minnesota Legislature passed a bill to reform controversial contracts-for-deed real estate deals as a part of the Judiciary, Public Safety, and Corrections Supplemental Budget Bill. The measure includes greater protections for buyers and outlaws the sort of property churning that some brokers have been accused of engaging in. Gov. Tim Walz is expected to sign the bill this week.

Which Tech Company Has the Worst Reputation?

A new survey of how Americans see big-name brands isn't likely to get any likes at TikTok, Meta, and X, which land in the bottom six out of 100 regarding reputation.

The latest edition of an annual survey of corporate images by the Harris Poll and Axios finds that X, formerly Twitter, has the second-worst image with a "Reputational Quotient" score of 58.8. Only the fraud-ridden Trump Organization and its 54.0 score place lower.

Be Careful: These Android Apps Are Installing Malware, Stealing Your Data

More than 90 different Android apps available on Google Play have been found to contain malware, according to cloud cybersecurity firm Zscaler.

The malicious apps, which collectively garnered over 5.5 million installs, typically pose as PDF or QR code readers. In reality, they contain banking malware that secretly collects your data behind the scenes once you install a malware-laden app update. The payload then displays fake banking login pages on your device, which can be used to swipe your financial credentials and potentially access your bank accounts.

The NSA Says You Should Restart Your Phone Weekly: Here's Why

As Neal Ziring, technical director for the NSA's Capabilities Directorate, told the AP a few years back, rebooting your phone isn't going to stop the more sophisticated schemes, but "since a lot of modern cyberattacks are [a] chain of two, three, or even more vulnerabilities in a row that have to be successfully exploited...you can reset the adversary back to the beginning of that chain and force them to go through the whole thing again" by rebooting your device.

ALL WORKSHOPS ARE ONLINE

TechEdConnect® has workshops for everyone who uses a computing device. Some workshops have a formal classroom-type approach; others are informal meetings where ideas and problems are discussed. Below is a list of the various workshops and the leaders.

PHOTO & VIDEO EDITING Jim Iscaro

Learn to take pictures off your phone or camera, save them in an organized manner, back them up, and select the best. We then edit them so they look like the picture we wanted to take. We'll use an easy photo editor that is available in Windows and Mac and we will cover apps on Android and iOS devices.

TECHNOLOGY Anthony Tedesco

Meeting starts with discussions on any related area of technology attendees feel interested in. Followed by a presentation on a different technology topic each month.

NAVIGATING WINDOWS (*Alternating months*) Pierre Darmon

Q&A to address questions on Windows, from printing to device drivers, from changing default apps to addressing performance issues, and much more.

THE CURIOUS LION John Moore

What to do if a light does not light. What to do when your hair dryer will not turn on. How to map the circuits in your breaker panel. How to hook up a generator if you don't want to hire an electrician. How a 208-volt circuit differs from a 120-volt circuit. Bring your questions to find answers.

UPGRADE & REPAIR Jonathan Hauff

We cover hardware and software. The good, fun, and bad stuff. Sessions feature adding to your PC (cameras, phones, mass storage, backups) and upgrades; error messages; stubborn installations; dreaded “blue screens of death,” conflicts, and buggy programs, virus/spyware/identity issues and how to understand and solve them all!

DIGITAL CAMERAS Allan and Heather Turnbull

Do you want to know about the symbols and buttons on your camera? Do you want to know how to take a decent picture, download your pictures to your computer, and send them by email? Bring your digital camera and manual. We show you how to use it in a relaxed, informal, and hands-on environment.

ALL THINGS MOBILE

A roundtable discussion of Android and Apple devices. Share your phone and tablet experiences, apps, and favorite websites. We'll learn together. You don't need a device; we'll share ours with you. Open to all levels.

OFFICE SUITES George Hauss

Ah, you think you are an expert and don't have to come to George Hauss' workshop? In fact, George has been piling in the tips and tricks that make MS Office, LibreOffice, OpenOffice, and even the Mac Office Suite (iWork) much quicker and easier to use. Bring your own shortcuts to share. Put this workshop on your calendar and learn what you think you already know.

APPLE FOR BEGINNERS (*Alternating months*) Pierre Darmon

This workshop is geared for beginners. It is conducted as a Q&A for the most part. We cover all things Apple, from the Mac to the iPhone, iPad, Apple Watch, Airtags, and their relationship.

CULTURAL TECHNOLOGY David Lerner

Recent discussions on archaeology, gorgeous stained glass windows, World War II history, ships from the classical age. David Lerner shares his many interests with us and holds our attention throughout his workshop.

EXPLORING SOFTWARE Pierre Darmon

A different topic each month. Topics span from computer security to the paperless office to Chromebooks and printers, just to name a few.

PEEKING INTO WINDOWS Mark Lindemann

For those new to Windows or who recently bought their first computer, this workshop is for you.

Quotes from Isaac Asimov's Book of Quotes

1.2 A bird is an instrument working according to mathematical law, which instrument it is within the capacity of man to reproduce with all its movements, but not with a corresponding degree of strength, though it may therefore say that such an instrument constructed by man is lacking in nothing; it is,

he life of the bird, and this life must needs be supplied from that of

Leonardo da Vinci, Italian Architect/Artist/Inventor (1452-1519)

1-3 The [mechanical] bird I have described ought to be able by the help of the wind to rise to a great height, and this will prove to be its safety; since even if . . . revolutions [of the winds] were to befall it, it would still in time to regain a condition of equilibrium; provided that its various parts have a great power of resistance, so that they can safely withstand the fury and violence of the descent, by the aid of the defenses which I have mentioned; and its joints should be made of strong tanned hide, and sewn with cords of strong raw silk. And let no one encumber himself with iron bands, for these are

Soon broken at the joints or else they become worn out, and consequently it is well not to encumber oneself with them.

Leonardo da Vinci, Italian Architect/Artist/Inventor (1452-1519)

If a man has a tent made of linen of which the apertures have all been stopped up, and it be twelve braccia across (over twenty-five feet) and twelve in depth, he will be able to throw himself down from any height without sustaining injury.

[Of the invention of the parachute].

Leonardo da Vinci, Italian Architect/Artist/Inventor (1452-1519)

What can you conceive more silly and extravagant than to suppose a man racking his brains, and studying night and day how to fly?

William Law, English Clergyman/Writer (1686-1761)

1.6 Soon shall thy arm

Unconquer'd steam! A far

Drag the slow barge or drive the rapid car,

Or on wide-waving wings expanded bear

The flying chariot through the fields of air.

Erasmus Darwin, English Physician/Poet (1731-1802)

1.7 We will build a machine that will fly.

[He invented the first air balloon, 1784.]

Joseph-Michel Montgolfier, French Inventor/Aeronaut (1740-1810)
